

Car Key RFID Transponder Programmer

This car key programmer programs RFID transponders. It also generates RFID transponders from the immobilizer dump/EEPROM of the car.

Product Overview

Professional RFID Transponder Programming

The Car Key RFID Transponder Programmer is a specialized tool engineered for automotive electronics professionals. It is designed to facilitate the programming and generation of RFID transponders directly from immobilizer dump or EEPROM data, essential for vehicle key replication and ignition system maintenance. This device offers a robust solution for technicians needing to initialize blank transponders for vehicle startup.

Technical Capabilities

Core Functions

- Transponder Read/Write
- Key Maker Functionality
- Image Dump Generation
- Pin Calculation

Software Version	2.0
Supported Transponder Types	PCF7935, PCF7936, T5

Hardware Features

Status Indicators

Power Indicator • Work Indicator

Connectivity	USB
