

Carbide Turning Inserts CNMG120404

Carbide turning inserts are designed for precision machining. These inserts offer durable construction and advanced coating for extended tool life and superior cutting performance.

Product Overview

High-Performance Carbide Turning Inserts

These CNMG120404 carbide turning inserts are engineered for precision machining tasks requiring long tool life and stable performance. Manufactured from 100% new material, the inserts offer excellent durability and consistent cutting results across various applications. Designed for CNC operations, the unique geometry promotes efficient chip control and minimizes vibration for superior surface finish.

Technical Specifications

Insert Code	CNMG120404
Equivalent Designation	CNMG431

Features

Key Performance Metrics

100 %
Material Purity

Material Composition	100% New Material, High Performance, Durable Construction
----------------------	---

Application

Suitable Operations

- CNC Turning
- Precision Machining
- General Material Removal
