

Carbon Brush and Brush Holder Assembly for Auto Engines

Carbon brush and brush holder assemblies are essential for transferring electrical current to the rotating armature in electric motors and generators. These components feature durable carbon brushes for reliable contact, robust brush holders for secure mounting, and optimized designs for efficient performance.

Product Overview

Essential Engine Components

This assembly includes high-quality carbon brushes and brush holders designed specifically for automotive engine applications. These components are critical for the efficient transfer of electrical current to the rotating armature within electric motors and generators. Engineered for durability and reliable contact, this collection offers various configurations to support automobile engine maintenance and aftermarket repair requirements.

Technical Details

Key Features

- Durable carbon material for reliable electrical contact
- Robust holder construction for secure mounting
- Optimized design for longevity
- Compatible with various engine models

Primary Application	Automotive Engine Systems
Included Components	Carbon Brush, Brush Holder

Usage

Intended Use

Auto Parts • Aftermarket Service • Engine Maintenance • Repair
