

Carbon Fiber Radiant Space Heater

This space heater uses a carbon fiber heating tube to generate radiant heat. It features overheat protection and a double safety device for safe operation.

Product Overview

Efficient Radiant Heating

The NR-03 carbon tube heater is a specialized space heating apparatus designed for effective indoor climate control. Utilizing advanced carbon fiber heating elements, it provides efficient, consistent radiant warmth suitable for various household environments. Its compact, portable design and intuitive rotary control make it a versatile and user-friendly solution for localized heating needs.

Technical Specifications

Heating Element	Carbon Fiber
Environment	Indoor Use, Household

Safety & Design

Safety Features

- Protective metal grille
- Contact prevention design

Control Type	Rotary control knob
