

Carbon Steel Blind Flange

This carbon steel blind flange is used to close off the end of a piping system. It features a solid disc without a center hole for complete shut-off and pressure containment.

Product Overview

Industrial Blind Flange Solution

This carbon steel blind flange is engineered to effectively seal the end of piping systems, providing a robust solution for pressure containment. Designed with a solid disc configuration and no center hole, it ensures complete shut-off for pipeline termination. Precision-drilled bolt holes facilitate secure, leak-proof installation across a wide range of demanding industrial environments.

Technical Specifications

Material	Carbon Steel
Flange Type	Blind Flange

Key Features

Product Highlights	Corrosion Resistant, High Durability, Precision Drilled, Leak-Proof Design
--------------------	--

Applications

Suitable Uses

- Pipeline termination
- Pressure containment
- Industrial piping systems
