

Carburetor for Internal Combustion Engines

This carburetor is designed for internal combustion engines. It mixes air and fuel in the correct proportions for combustion within the engine's cylinders.

Product Overview

Precision Fuel Management

This carburetor is engineered to facilitate optimal combustion by precisely mixing air and fuel for internal combustion engines. Designed with a comprehensive assembly of metallic components, it includes essential features such as a fuel bowl, throttle body, and integrated linkages. It serves as a reliable solution for maintaining engine performance in older or smaller engine applications.

Technical Details

Key Components

- Fuel Bowl
- Throttle Body
- Fuel Linkages
- Air/Fuel Mixture Control

Construction

Metallic Components, Durable Assembly

Compatibility & Connections

Ports and Connections

- Fuel Lines
- Vacuum Lines
- Engine Control System Ports

Ideal Application

Older Engines • Smaller Engines
