

Carriage Bolts DIN603

High-strength carriage bolts are designed for fastening wood to wood or metal to wood. They feature a smooth, domed head and a square shoulder that prevents rotation during tightening.

Product Overview

DIN603 Carriage Bolts

These high-strength carriage bolts are engineered for reliable fastening in wood-to-wood or metal-to-wood applications. Featuring a signature smooth, domed head and a square shoulder, they are specifically designed to prevent rotation during the tightening process. Crafted from durable steel with a corrosion-resistant finish, these bolts provide long-lasting performance, making them an ideal choice for outdoor projects such as decking and fencing.

Technical Specifications

Standard	DIN 603
Material	Steel
Finish	Corrosion-resistant

Applications

Common Applications	Decking, Fencing, Wood-to-Wood Fastening, Metal-to-Wood Fastening
---------------------	---

Design Features

Head Type	Smooth, domed head
Locking Mechanism	Yes
