

Cast Iron Drainage Pipe EN877

Cast iron pipes designed to meet the EN 877 standard for drainage systems. These pipes are suitable for transporting wastewater and sewage in building applications.

Product Overview

High-Quality Drainage Solutions

These cast iron pipes and fittings are manufactured to meet the rigorous BS EN 877 and DIN EN 877 standards, ensuring reliable performance in building drainage systems. Designed for the efficient transport of wastewater and sewage, the pipes feature a robust construction that provides exceptional durability and resistance to corrosion. Available in various sizes, they offer a versatile and long-lasting solution for professional plumbing and infrastructure projects.

Technical Standards

Compliance Standards	BS EN 877, DIN EN 877, EN 877
----------------------	-------------------------------

Material Specifications

Material	Cast Grey Iron
Coating	Epoxy

Application Details

Primary Application

- Building drainage systems
- Wastewater transport
- Sewage systems

Key Features

Performance Benefits

Corrosion Resistant • Robust Construction • Durable • High Quality

Product Details

Included Components	Pipes and Fittings
