

# Cast Iron Motor Wheel Cores

Cast iron wheel cores designed for use in motors and engines. These components feature a central hole and circular arrangement of smaller holes.

## Product Overview

### Precision Cast Iron Motor Wheel Cores

These precision-engineered wheel cores are designed for demanding industrial motor and engine applications. Constructed from high-quality cast iron, they offer robust durability and reliable performance under mechanical stress. Featuring a standardized circular hole configuration, these components are optimized for seamless integration into industrial machinery assemblies.

## Technical Specifications

### Primary Application

Motor Components • Engine Parts • Industrial Machinery

Material	Cast Iron
Part Markings	C2003-2-10, AX
Material Grade	C-Grade Steel (C $\phi$ )
