

Cast Iron Water Pump for Construction Machinery

This cast iron water pump is designed for construction machinery applications. It features a robust housing with multiple mounting points, a central impeller shaft, and a rear cover plate with a thermostat housing.

Product Overview

Industrial Cast Iron Water Pump

This high-durability water pump is engineered specifically for construction machinery applications. It features a robust cast iron housing designed to withstand demanding environments, ensuring reliable coolant circulation. The unit includes a precision central impeller shaft and an integrated thermostat housing to maintain optimal engine temperatures during heavy-duty operation.

Technical Specifications

Material	Cast Iron
Key Features	Rust-proof, Robust Housing, Thermostat Integration

Identification

Part Reference	A294
----------------	------
