

Cast Iron Water Pump Housing

This cast iron component is typically used in water pump assemblies. Its robust construction is designed to withstand significant pressure and wear, making it suitable for industrial or automotive applications.

Product Overview

Cast Iron Water Pump Housing

This cast iron water pump housing is engineered for durability and reliability in demanding industrial or automotive fluid handling applications. The robust construction is designed to withstand significant pressure and wear, ensuring long-term operational stability. Precision machining on the exterior surfaces guarantees tight tolerances for seamless sealing and assembly with other pump components.

Material & Construction

Material	Cast Iron
Process	Casting, Precision Machining

Design Features

Key Features

- Multiple fluid ports
- Optimized internal passages
- High-pressure resistance
- Machined sealing surfaces

Application Suitability

Industrial • Automotive
