

# Cast Metal Power Transmission Pulley

This cast metal pulley is designed for power transmission systems. It features a grooved outer rim for belt alignment and large circular cutouts to reduce weight.

## Overview

### Industrial Power Transmission Solution

This cast metal pulley is engineered for robust performance in power transmission systems, offering a balance of strength and weight efficiency. Featuring a precision-cast design with integrated weight-reduction cutouts, it is built to withstand demanding operational environments. The grooved outer rim ensures optimal belt compatibility, making it a reliable component for heavy-duty machinery and industrial drive assemblies.

## Technical Specifications

### Application Suitability

Power Transmission • Industrial Machinery • Belt Drive Systems

<b>Material</b>	Cast Metal
<b>Design Features</b>	Weight Reduction Cutouts, Grooved Rim, Central Mounting Hub
