

Cast Steel Beam Clamp for Structural Support

This heavy-duty cast steel beam clamp is designed for secure attachment to structural beams. Its robust construction ensures high load capacity and durability for various industrial and construction applications.

Product Overview

Heavy-Duty Structural Support

This cast steel beam clamp is engineered for secure and reliable attachment to structural beams in demanding industrial and construction environments. Its robust construction ensures a high load capacity, providing peace of mind for critical support applications. The design includes a versatile set screw mechanism for tightening, alongside a pre-drilled hole that offers additional fastening flexibility for various installation needs.

Technical Specifications

Suitable Applications

- Industrial construction
- Structural support systems
- Beam connections

Material	Cast Steel
Key Features	Heavy-duty, High load capacity, Set screw included, Pre-drilled hole
