Product Overview

Castor Seed Shelling Machine

The Castor Seed Shelling Machine is an industrial-grade solution designed for the efficient, high-volume processing of castor beans. Featuring a robust construction with rubber-lined peeling chambers, it ensures effective shell removal while preserving the integrity of the seed kernel. This equipment is suitable for large-scale oil extraction facilities and agricultural processing plants seeking a reliable, cost-effective method to streamline production.

Technical Specifications

Industrial-grade castor bean sheller designed for high-volume processing and efficient shell removal.

Key Components

- Machine frame
- Wind machine
- Peeling chamber
- Feeding hopper
- Discharge opening

Peeling Mechanism

Rubber-based internal shelling system designed to remove shells without damaging the seed skin.

Service & Warranty

Warranty Period	1 year
Maintenance Policy	Lifelong maintenance support provided.
Support Terms	Free parts for design defects, Technical support available, User responsibility for human-factor damage
