

Caving Hydraulic Support for Longwall Mining

This caving hydraulic support is a critical component for modern longwall mining operations. It provides essential roof support in challenging underground environments, ensuring operator safety and efficient coal extraction.

Overview

High-Performance Longwall Mining Support

The ZF series caving hydraulic support is designed for robust performance and safety in challenging underground mining environments. Featuring a modular, heavy-duty construction, this system allows for adjustable height and load-bearing capacity to adapt to varying geological conditions. Advanced integrated sensors and control mechanisms ensure synchronized movement, real-time stability monitoring, and enhanced operational efficiency.

Technical Features

Operational Performance

1 Integrated

Hydraulic Control

1 Standard

Modular Design

Key Design Features

Heavy-duty construction, Adjustable height, Real-time monitoring, Synchronized movement, Corrosion-resistant

Operational Capabilities

Operational Adaptability

- Variable seam height adjustment
- High load-bearing capacity
- Automated pressure sensing
- Easy maintenance modular components
