

Cavity Mouth Degaussing Machine for Magnetic Storage Media

This degaussing machine is suitable for professional office data destruction. It destroys a variety of magnetic storage media, including server hard disks with brackets, and features voltage monitoring.

Product Overview

Professional Data Security Solution

The XBC-SuperEx cavity mouth degaussing machine is a high-performance device engineered for professional office data destruction. It provides secure and reliable erasure of various magnetic storage media, including server hard disks with brackets. With advanced features like real-time field strength monitoring and automated logging, it ensures total compliance and security for sensitive data environments.

Technical Features

Integrated Monitoring

Voltage Monitoring, Field Strength Monitoring, Supercharged Compensation

Connectivity & Workflow

Digital Integration

- USB Computer Connectivity
- Real-time degaussing information logging
- Direct label printer integration

Compatibility

Supported Media

- Magnetic storage media
- Server hard disks with brackets
