

Ceiling Rose for Electrical Fixtures

A ceiling rose is a component used in electrical wiring to connect a light fixture to a ceiling's electrical supply. It provides a safe and organized point for making electrical connections.

Product Overview

Professional Ceiling Rose for Electrical Fixtures

This ceiling rose is a decorative and functional element designed for professional electrical wiring installations. It provides a safe, organized, and insulated point for connecting light fixtures to the main electrical supply. The integrated cover ensures all wiring is neatly concealed, offering a clean and finished appearance for any ceiling installation.
