

Cement Production Line Project (2500 T/D)

This project constructs a 2500 t/d NSP cement production line. It is designed for an annual output of 910000 tons of cement using the EPC contract mode.

Project Overview

Turnkey Cement Production Solution

This project covers the full construction of a high-efficiency 2500 t/d NSP cement production line. Designed to achieve an annual output of 910,000 tons, the facility leverages an EPC contract model for seamless engineering, procurement, and construction. Located in Vietnam, the plant integrates modern preheater tower technology and rotary kiln systems to ensure high-performance output.

Technical Metrics

Daily Production Capacity

2500 T/D
Daily Capacity

910000 Tons
Annual Output

Contract Mode

EPC (Engineering, Procurement, and Construction)

Project Details

Core Infrastructure

- Preheater tower with cyclone system
- Rotary kiln system
- Concrete raw material silos
- Conveyor networks
- Dust collection systems

Project Location

Vietnam
