

Cemented Carbide Cutter for Metal Cutting

This cemented carbide cutter is designed for metal cutting applications. It features a durable construction and sharp cutting edges for efficient material removal and precise cuts.

Product Overview

High-Performance Cemented Carbide Cutters

These professional-grade cemented carbide cutters are manufactured to strict international standards for metal cutting applications. Engineered from 100% new raw materials, they offer exceptional durability and stable performance during heavy-duty use. The design ensures a long service lifetime and high precision, making them a reliable choice for diverse metalworking processes.

Technical Specifications

Material Quality

100% New Raw Material • Cemented Carbide

Available Varieties

- Various types available
- Various sizes available

Customization

Yes
