

Central Air Conditioner Weather Cover

This turbine cover prevents heat loss during the heating season. It is suitable for textile mill engineering and light industry engineering.

Product Overview

Professional Weather Protection

This round central air conditioner turbine cover is designed to shield outdoor units from environmental elements. By preventing heat loss during the heating season, it helps maintain operational efficiency and extends the overall lifespan of the equipment. This durable solution is ideally suited for textile mill engineering and various light industry applications.

Technical Specifications

Core Benefits

- Prevents heat loss during heating season
- Weather-resistant material
- Protects outdoor air conditioning units

Application Industry	Textile Mill Engineering, Light Industry
Design Shape	Round
