

Central Tube Fiber Optic Cable

Central tube optical cable designed for high-performance data transmission. It features a central tube construction housing multiple optical fibers, providing excellent protection and durability.

Product Overview

High-Performance Central Tube Optical Cable

This central tube optical cable is engineered for reliable, high-bandwidth data transmission in both indoor and outdoor environments. Featuring a robust construction with a central tube housing multiple optical fibers, it ensures excellent protection and durability. The design incorporates metallic strength members and water-blocking elements to provide superior tensile strength and environmental resistance.

Construction & Materials

Cable Components

- UV cured optical fiber
- Jelly filling
- PBT loose tube
- Phosphorized steel wire
- Water-blocking ring
- Steel-plastic laminated tape
- PE sheath

Protection Features

Water-blocking, Rodent protection, UV resistance, High tensile strength

Application

Usage Environment

Indoor • Outdoor
