

Centrifugal Air Filtration Machine

This centrifugal air filtration machine uses air suction for efficient air filtration and ventilation. The machine employs a centrifugal fan to generate a strong airflow, which draws air through a filter to eliminate dust and other airborne particles.

Product Overview

Centrifugal Air Filtration Technology

The centrifugal wind screen machine is a specialized air suction device engineered for high-efficiency air filtration and ventilation. By utilizing a powerful centrifugal fan mechanism, it effectively draws air through a filtration system to capture dust, pollen, and various airborne particulates. Designed for versatility, this unit is suitable for both residential and commercial environments where maintaining clean air quality is a priority.

Technical Specifications

Design Highlights

- Compact footprint
- Easy installation
- Low maintenance requirements
- High-performance centrifugal fan

Filtration Method	Centrifugal Air Suction
Recommended Applications	Residential, Commercial, Air Ventilation, Dust Removal
