

Centrifugal Air Mover for Drying and Ventilation

This centrifugal air mover is designed for rapid drying and ventilation. Its robust construction and powerful motor ensure efficient airflow, suitable for water damage restoration and carpet drying.

Overview

High-Performance Air Movement

The PB40001 is a high-performance centrifugal air mover engineered for rapid drying and effective ventilation. Its robust construction and powerful motor facilitate efficient airflow, making it an essential tool for water damage restoration, carpet drying, and general air circulation. Designed with a compact, durable housing and multiple operating positions, it offers both professional-grade reliability and ease of transport for demanding environments.

Performance Metrics

Key Performance Metrics

1 Level

High-Velocity Output

1 Efficiency

Low Amp Draw

Features & Design

Typical Applications

- Water damage restoration
- Carpet drying
- General air circulation

Design Features

Robust Housing, Multi-Position Operation, Compact Design, Integrated Carry Handle
