

Centrifugal Clutch Assembly for Small Engines

This centrifugal clutch assembly is designed for small engines. It features a robust metal housing, friction pads, and spring mechanism for engaging and disengaging power transmission.

Product Overview

High-Performance Centrifugal Clutch

This centrifugal clutch assembly is engineered specifically for small engine applications, providing reliable power transmission for go-karts, mini bikes, and similar machinery. Featuring a robust metal housing, durable friction pads, and a precision-engineered spring mechanism, it ensures smooth engagement and disengagement during operation. Designed for straightforward installation, this component offers consistent performance and longevity for demanding small-engine tasks.

Technical Specifications

Rated Speed

145 RPM

Engagement Speed

Key Components

- Robust Metal Housing
- Friction Pads
- Spring Engagement Mechanism

Compatibility

Installation

Easy Installation

Common Applications

Go-karts, Mini bikes, Small engines
