

Centrifugal Clutch Assembly with Toothed Gear and Clutch Bell

This is a centrifugal clutch assembly with a toothed gear. It includes a cylindrical clutch bell with a splined hub.

Product Overview

High-Performance Centrifugal Clutch Assembly

This centrifugal clutch assembly is engineered for reliable power transmission in mechanical systems. It features a precision-machined toothed gear designed for optimal engagement and a robust clutch bell with a splined hub for secure mounting. Built for durability, this assembly ensures smooth operation and efficient torque transfer in demanding industrial applications.

Technical Specifications

Included Components

- Toothed Gear
- Clutch Bell

Gear Configuration	Toothed gear with evenly spaced circumference teeth
Mounting Holes	4 holes
Clutch Bell Hub	Central splined hub
