

Centrifugal Fan for Mining Machinery

High-performance centrifugal fan designed for mining machinery applications. It is suitable for use in ventilation systems and other industrial applications requiring high static pressure and airflow.

Product Overview

High-Performance Mining Ventilation

This centrifugal fan is engineered specifically for the rigorous demands of mining machinery. Featuring a robust impeller design with backward-curved blades, it delivers superior airflow efficiency and high static pressure performance. Built with durable materials, this unit is optimized for reliable operation in harsh industrial environments, making it an ideal choice for ventilation systems and heavy-duty air handling applications.

Technical Specifications

Performance Features

- High static pressure capability
- High airflow efficiency
- Durable construction for harsh environments

Blade Configuration	Backward-curved
Application	Mining Machinery, Industrial Ventilation, Air Handling Units
