

Centrifugal Fan Impeller for Ventilation Systems

Centrifugal fan impeller designed for use in ventilation and air conditioning systems. The impeller features curved blades for efficient airflow and is constructed from durable metal for long-lasting performance.

Product Overview

High-Efficiency Centrifugal Impeller

This centrifugal fan impeller is engineered specifically for demanding ventilation and air conditioning systems. Featuring a precision-curved blade design, it ensures optimal airflow and consistent performance across various industrial and commercial environments. Constructed from robust, durable metal, this component is built to withstand continuous operation in HVAC units and exhaust systems.

Technical Specifications

Blade Design

Curved Blades • High-Efficiency

Material

Durable Metal

Suitable Applications

Exhaust Fans, HVAC Units, Industrial Ventilation, Air Conditioning Systems
