

Centrifugal Fan Impeller with Backward-Curved Blades

This centrifugal fan impeller is engineered for high-performance air movement in industrial settings. Its backward-curved blades are designed to optimize airflow and minimize noise, ensuring efficient operation.

Product Overview

Industrial Airflow Solution

This centrifugal fan impeller is engineered for high-performance air movement across diverse industrial environments. Equipped with precision-engineered backward-curved blades, it optimizes airflow efficiency while minimizing operational noise levels. Each unit is dynamically balanced to ensure smooth performance, reduced mechanical stress, and an extended service lifespan.

Technical Specifications

Blade Design	Backward-curved
Dynamic Balancing	Yes

Key Features

Construction Highlights	Corrosion Resistant, Wear Resistant, Robust Construction
-------------------------	--

Applications

Recommended Applications

- HVAC Systems
- Ventilation Units
- Industrial Air Handling
