

# Centrifugal Pump

The centrifugal pump is designed for transferring fluids. Its functionality relies on converting rotational kinetic energy to the hydrodynamic energy of the fluid flow.

## Overview

### Industrial Centrifugal Pump

This industrial centrifugal pump is designed for reliable fluid transport in demanding environments. Featuring robust construction, it is engineered to handle continuous operation with high efficiency. The unit integrates advanced pneumatic actuation for precise, remote control, making it an ideal solution for automated industrial processes.

## Technical Specifications

Actuation Method	Pneumatic
Valve Type	Gate Valve

## Construction

Finish	Blue Coated
Body Material	Cast Iron, Steel
