

Centrifugal Pump and Motor Set

This centrifugal pump is coupled with an electric motor and mounted on a baseplate. It is designed for fluid transfer applications.

Product Overview

Centrifugal Pump and Motor Set

This centrifugal pump and motor set is engineered for efficient fluid transfer applications across various industrial environments. The system features a durable pump with a volute casing and impeller, coupled with a reliable induction motor. Mounted on a common baseplate for stability, this assembly provides a robust solution for demanding pumping requirements.

Technical Specifications

Model Identifier	180-1
Key Components	Volute Casing, Impeller, Suction Flange, Discharge Flange, Induction Motor
Mounting	Common baseplate assembly
