

Centrifugal Pump Component

This is a component designed for centrifugal pumps. The component features a ribbed section near the head and a hexagonal end.

Product Overview

Precision Centrifugal Pump Component

This high-precision component is engineered specifically for centrifugal pump assemblies, ensuring optimal structural integrity and performance. The design features a robust ribbed section near the head and a hexagonal end, facilitating secure installation and maintenance. With clearly defined geometric ratios, this part is built to meet the demanding mechanical requirements of industrial fluid handling systems.

Technical Dimensions

Key Dimensional Ratios

2.2 D

Head Diameter Ratio
