

Centrifugal Pump Component

This component is designed for use in centrifugal pumps. The metallic component features a conical head, cylindrical body, a pointed tip, and a prominent ring or collar along its shaft.

Product Overview

Precision Centrifugal Pump Component

This high-precision metallic component is engineered for critical mechanical applications within centrifugal pump assemblies. Featuring a specialized design with a conical head, cylindrical body, and pointed tip, it is built to ensure reliable performance and structural integrity. Its precise manufacturing makes it an essential part for maintaining the operational efficiency of industrial pumping systems.

Technical Specifications

Design Characteristics

- Conical head design
- Cylindrical body
- Pointed tip geometry
- Integrated shaft collar

Material

Metallic

Primary Application

Centrifugal Pump Assembly, Mechanical Fastening
