

Centrifugal Pump for Fuel Transfer

This centrifugal pump is designed for transferring gasoline and other similar fluids. The pump and motor are mounted on a sturdy baseplate and the motor is explosion-proof, conforming to safety standards for hazardous environments.

Product Overview

High-Performance Fuel Transfer Solution

This centrifugal pump is engineered for the efficient and safe transfer of gasoline and similar volatile fluids. Designed with a robust, horizontally mounted casing and a reliable electric motor, it ensures consistent flow and stability. The unit is built with durable metallic materials and includes an explosion-proof motor, making it an ideal choice for hazardous industrial environments requiring strict safety compliance.

Technical Specifications

Mounting Configuration	Horizontal baseplate-mounted
Material Construction	Metallic, Corrosion-resistant

Safety & Compliance

Safety Features

- Explosion-proof motor enclosure
- Hazardous environment compatible
- Coupled drive system

Compliance Status

Explosion-Proof
