

# Centrifugal Pump Shaft with Sealing Grooves

Shaft designed for use in centrifugal pumps. It features a cylindrical body with flanged ends and multiple circumferential grooves for sealing.

## Product Overview

### Precision-Engineered Pump Shaft

This centrifugal pump shaft is a critical mechanical component designed for high-performance fluid handling systems. Featuring a robust cylindrical body with flanged ends, it includes a specialized central section with three circumferential grooves for optimized sealing. The inclusion of integrated red sealing elements ensures superior fluid containment and operational efficiency in demanding industrial pump applications.

## Technical Specifications

### Material

Metallic

### Component Type

Centrifugal Pump Shaft

### Design Features

Cylindrical Shaft, Flanged Ends, Three Circumferential Grooves, Integrated Sealing Elements

### Application Category

Machinery and Industrial Parts > General Machinery > Pumps
