

Centrifugal Ventilation Fan

This centrifugal fan is designed for air conditioning and ventilation equipment. It features a robust housing and bladed impeller for efficient air movement in household and industrial applications.

Product Overview

Centrifugal Ventilation Fan

This centrifugal ventilation fan is engineered for high-performance air conditioning and ventilation systems. It features a robust housing and a precision-bladed impeller designed to ensure efficient and reliable air movement. The unit is versatile enough to support both demanding industrial applications and standard household ventilation requirements.

Technical Specifications

Construction Features

- Robust housing
- Bladed impeller design
- Efficient air movement architecture

Application

Air Conditioning, Ventilation, Industrial, Household
