

Centrifugal Ventilation Fan

This centrifugal fan is a high-performance ventilation solution suitable for various applications. It features a robust construction ensuring durability and an efficient impeller design for optimal airflow and quiet operation.

Overview

High-Performance Centrifugal Ventilation

This double inlet forward curved centrifugal fan is engineered for reliable air movement in HVAC systems, commercial buildings, and industrial processes. Its robust construction ensures long-lasting durability, while the efficient impeller design maintains optimal airflow with quiet operation. Designed for straightforward installation and maintenance, this unit serves as a dependable ventilation solution for professional applications.

Technical Specifications

Performance Metrics

5000 m³/h
Max Air Volume

500 Pa
Max Pressure
