

Centrifugal Water Circulation Pump for HVAC&R

This centrifugal pump is engineered for efficient water circulation in HVAC&R applications. Its durable construction ensures long-lasting performance, while its optimized impeller design maximizes flow rate and minimizes energy consumption.

Overview

High-Efficiency HVAC&R Circulation

This robust centrifugal pump is engineered for efficient water circulation in various HVAC&R applications. Its durable construction ensures long-lasting performance, while its optimized impeller design maximizes flow rate and minimizes energy consumption. The pump features a compact footprint for easy installation and integration into existing systems, delivering reliable and consistent operation.

Performance Metrics

Key Benefits

- Optimized impeller design
- High flow rate efficiency
- Energy consumption minimization
- Compact installation footprint

Construction Quality

Durable • Compact • Reliable

Primary Application

HVAC, Refrigeration, Water Circulation
