

Centrifugal Water Pump for Fluid Transfer

This centrifugal water pump is designed for efficient water transfer. The pump features a robust cast iron construction and flanged connections for compatibility with standard piping systems.

Product Overview

Industrial Centrifugal Water Pump

This centrifugal water pump is engineered for efficient and reliable fluid transfer in demanding industrial and agricultural environments. Featuring a durable cast iron construction and a horizontally split volute casing, the unit is built to withstand rigorous daily operation. The close-coupled design combined with standard flanged ports ensures seamless integration into existing piping systems for diverse fluid handling requirements.

Technical Specifications

Body Material	Cast iron
Design	Close-coupled, horizontally split volute casing
Connection Ports	Flanged

Key Features

Operational Advantages

- Robust cast iron construction for longevity
- Reliable electric motor drive system
- Standardized flanged connections for easy installation
- Efficient fluid transfer capabilities

Suitable Applications	Industrial, Agricultural, Fluid Handling
