

Centrifugal Water Pump for HVAC&R Systems

This centrifugal water pump is engineered for various applications, including HVAC&R systems. Its durable construction ensures longevity and reliable performance for consistent flow rates and pressure.

Overview

Reliable HVAC&R Circulation

The DKM-series centrifugal pump is a robust and efficient solution engineered for consistent flow rates and pressure in HVAC&R systems. Its durable construction ensures long-term reliability for demanding water circulation needs. The compact design facilitates straightforward installation even in confined spaces, while the integrated energy-efficient motor helps minimize operational power consumption.

Technical Specifications

Performance Focus

- Consistent flow rate delivery
- Reliable pressure maintenance
- Low power consumption

Primary Application

HVAC&R Systems

Key Design Features

Compact Design, Energy-Efficient Motor, Durable Construction
