

Centrifugal Water Pump with Stainless Steel Construction

This centrifugal water pump is designed for a variety of applications. Its stainless steel construction provides corrosion resistance and durability.

Product Overview

Industrial Centrifugal Water Pump

This high-performance centrifugal water pump is engineered with premium stainless steel construction, ensuring exceptional corrosion resistance and longevity in demanding environments. Designed for efficiency, it features a robust electric motor and standardized flanged connections, allowing for seamless integration into existing industrial and agricultural piping systems. Its compact, durable architecture makes it a reliable solution for various fluid management applications requiring consistent flow and durability.

Construction & Design

Material	Stainless Steel
Connection Type	Flanged
Design Highlights	Corrosion Resistant, Compact Design, Robust Build

Application & Compatibility

Suitable Sectors

- Industrial Processing
- Agricultural Irrigation
- Water Distribution Systems
