

Centrifugal Water Transfer Pump

This close-coupled centrifugal pump is designed for transferring water and other low-viscosity fluids. It features a robust electric motor, durable cast iron construction, and a volute casing.

Overview

Centrifugal Water Transfer Pump

This close-coupled centrifugal pump is engineered for the efficient transfer of water and various low-viscosity fluids. Featuring a robust electric motor and durable cast iron construction, it is built to withstand demanding industrial and commercial environments. The integrated volute casing ensures optimal hydraulic performance, making it an ideal solution for applications such as water circulation, pressure boosting, and general fluid transfer.

Technical Specifications

Construction Material	Cast Iron
Pump Type	Close-coupled centrifugal
Casing Design	Volute casing

Applications

Primary Applications	Water circulation, Pressure boosting, Fluid transfer, Industrial use, Commercial use
----------------------	--

Key Features

Key Design Features

- Robust electric motor for efficiency
- Durable cast iron build for longevity
- Optimized hydraulic performance
- Designed for low-viscosity fluids
