

# Ceramic Disc Brake Pads D1455

High-performance ceramic disc brake pads deliver optimal braking power and durability. Engineered for quiet operation and reduced brake dust, these pads ensure reliable stopping power across various conditions.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Carbon Nanofiber Brake Pads

These advanced ceramic disc brake pads utilize carbon nanofibers (CNFs) as a matrix to deliver superior thermal resistance and braking performance. Engineered for safety and longevity, the formula provides consistent stopping power in diverse climates and terrains, from high mountains to snow fields. The design effectively dissipates heat and eliminates noise, ensuring a comfortable driving experience without compromising the integrity of the brake assembly.

## Performance Metrics

### Performance Highlights

**650 °C**

Max Heat Resistance

**60000 km**

Min Service Life

**100000 km**

Max Service Life

## Technical Specifications

### Key Features

- Slotted chamfer design for improved heat dissipation
- Ablation process for stable composition
- High bonding and shear strength
- Zero pollutant emissions
- Quiet braking operation

### Material Composition

Carbon Nanofibers, Ceramic, Copper-Free, Asbestos-Free, Lead-Free, Antimony-Free

## Compatibility & Identification

### Part Identification

Reference	Code
Primary Part Number	D1455
OEM Reference	68052369AA
Secondary ID	D1455-8655-BTT01-FF
