

Cereals Processing Line with Flour Mixer

This automated system is designed for manufacturing various cereal-based food products. It integrates multiple machines for mixing, forming, cooking, and packaging to ensure consistent product quality.

Overview

Automated Cereals Processing Solution

This high-volume cereals processing line is engineered for consistent, industrial-scale food manufacturing. The integrated system streamlines the entire production workflow, from initial flour mixing to final packaging. Designed for reliability and efficiency, it ensures uniform product quality across mixing, forming, cooking, and cooling stages.

System Components

Included Machinery

- Flour Mixer
- Extruder Unit
- Conveyor System
- Industrial Oven
- Cooling System
- Packaging Module
