

CG125 Motorcycle Clutch Assembly

This motorcycle clutch is designed for CG125 models. It is a multi-plate system with friction and steel plates for reliable power transfer.

Product Overview

CG125 Clutch Performance

This motorcycle clutch assembly is specifically engineered for the CG125 platform, ensuring reliable power transfer and smooth gear shifting. The system utilizes a robust multi-plate design featuring a durable metal clutch basket and a precision-engineered clutch pack. Designed for consistent performance, it integrates seamlessly with standard CG125 drivetrain configurations.

Technical Specifications

Key Features

- Integrated clutch basket with external gear teeth
- Interleaved friction and steel plate pack
- Pressure plate operation
- Engineered for reliable power transfer

Compatibility	CG125 Motorcycles
Clutch System	Multi-plate wet clutch
Construction Materials	Metal Basket, Friction Plates, Steel Plates
