

CG200 Water-Cooled Motorcycle Engine with Automatic Clutch

The CG200 is a water-cooled, single-cylinder, four-stroke engine featuring an automatic clutch, ideal for motorcycles and ATVs. It offers a compact design, overhead valve (OHV) configuration, and approximately 200cc displacement.

Overview

High-Performance 200cc Engine

The CG200 is a robust, water-cooled, single-cylinder, four-stroke engine engineered for motorcycles and ATVs. Featuring an overhead valve (OHV) configuration and an automatic clutch, this engine simplifies operation while maintaining consistent power output. Its advanced water-cooling system ensures optimal thermal management, making it a reliable choice for demanding riding conditions and long-term durability.

Technical Specifications

Displacement	200 cc
Cooling System	Water-cooled
Engine Type	Single-cylinder, 4-stroke, OHV
Transmission	Automatic Clutch

Key Features

Key Highlights	Electric Start, Reliable Ignition, Water-Cooled, OHV Configuration, Easy Maintenance
