

Chemical Blending Equipment

This equipment is designed for mixing and blending various substances in chemical processes. It is suitable for applications in chemical processing, research, and development.

Overview

Versatile Chemical Blending Solution

This high-performance chemical blending equipment is engineered for precision mixing and processing of various substances. Featuring a comprehensive control interface, it supports a wide range of operational modes including liquefying, stirring, and grinding. Its robust design makes it an ideal asset for laboratory research, development, and small-scale chemical processing applications.

Operational Capabilities

Available Cycle Modes

- Cycle
- Blend
- Liquefy
- Stir
- Mix
- Grind
- Puree
- Whip
- Pulse
- Grate
- Chip
- Smooth

Supported Functions

Blend, Liquefy, Stir, Mix, Grind, Puree, Whip, Pulse, Grate, Chip

Equipment Design

Key Components

- Clear processing container
- Secure lid mechanism
- Ergonomic handle
- Control button interface
- Detachable blade container
