

Child Car Seat Occupancy Alarm

This alarm system is designed to prevent child abandonment and ensure children remain properly seated in car seats. It activates an audible and visual alert if a child is left in the car seat when the vehicle is turned off, or if the child moves or leaves the seat during travel.

Overview

Smart Child Safety Monitoring

This child car seat occupancy alarm is an essential safety accessory designed to prevent avoidable tragedies by monitoring your child's presence in the vehicle. The system features an intelligent anti-abandonment function that triggers an acoustic and visual alarm if the car engine is turned off while the child remains in the seat. With easy plug-and-play installation and wireless communication between the sensor and display, it offers a reliable, user-friendly solution for busy parents.
