

Circular Metal Cutting Blades

Circular metal cutting blades are designed for industrial cutting and slicing tasks. The metal blades come in various sizes to accommodate different cutting widths and material thicknesses.

Product Overview

Precision Circular Cutting Blades

These high-quality circular metal cutting blades are engineered for demanding industrial slicing and cutting applications. Featuring a robust metallic construction, these blades are designed for durability and consistent performance across various material thicknesses. The inclusion of central mounting holes and additional perimeter stabilization points ensures secure attachment and reliable operation in professional machinery.

Technical Specifications

Primary Applications

- Industrial Cutting
- Material Slicing
- Machine-mounted Operations

Design Features

Variable Diameters • Precision Engineered • High-Stability Design

Material Composition	Industrial-grade metal
Mounting Configuration	Central Mounting Hole, Perimeter Stabilization Holes
