

Circular Network Communication Switch

This network communication switch is designed for integration into electronic systems. The device features multiple electrical contacts and a rotating mechanism, making it suitable for use in a variety of communication applications.

Product Overview

Circular Network Communication Switch

This circular network communication switch is engineered for robust integration into complex electronic systems. Featuring a durable housing and a specialized rotating mechanism with metallic arms, it ensures reliable signal selection and connectivity. The design includes multiple brass-colored electrical terminals arranged around the base, facilitating secure and efficient electrical connections for demanding communication applications.

Technical Specifications

Design Type	Circular Switch
Terminal Material	Brass-colored
Key Features	Rotating Mechanism, Durable Housing, Central Aperture
Primary Application	Network Communication Systems
