

Circular Saw Blade for Material Cutting

This precision circular saw blade is engineered for clean, accurate cuts in a variety of materials. Its design ensures minimal vibration and noise during operation, providing a smooth and efficient cutting experience.

Product Overview

Precision Cutting Performance

This precision circular saw blade is engineered for clean, accurate cuts across a variety of materials. Featuring a durable construction with a finely ground surface, the blade is designed to reduce friction and extend operational life. Its advanced design minimizes vibration and noise during use, ensuring a smooth and efficient cutting experience for professional applications.

Technical Specifications

Operational Benefits

- Extended service life
- Clean and accurate cuts
- Reduced friction
- Smooth cutting experience

Mounting Configuration

Central arbor hole for standard saw machine compatibility

Key Features

Precision Ground, Low Friction, Vibration Dampening, Noise Reduction
